

IVO Voice alarm system

WAA - audio signal input card

The WAA card is used to connect any sources of analog audio signal. The WAA card input is symmetrical and can be configured as a microphone or line input. The card converts the analog signal into a digital form, valid on the IVO mainboard bus. The module allows monitoring the incoming audio signal using the remote control signal. The WAA card supports MPT background microphones.

Selected technical data

Number of audio signal inputs	1
Input type	Symmetrical
Input configuration	Linear 0 dB or microphone
VOX function	+
Phantom power	+
Input monitoring by 18 or 20 kHz pilot	+
Power	20..60 V DC
Dimensions	3U, 4HP
