IVO Voice alarm system
MA- Microphone console

Microphone consoles come in three versions:

✦ MA- console with "gooseneck" alarm microphone

✦ MAR – console with a handheld alarm microphone

✦ MI – console with information microphone

The alarm console differs from the informative color of function keys and the availability of signal sockets. The definition of the console function takes place in the configuration software.
The console in the basic version consists of a main part equipped with a set of obligatory indicators and a set of 5 quick access buttons and 10 programmable keys. Subsequent constructions have 20, 30, 40 and more programmable buttons. Microphone consoles allow advanced control of the control panel functions. MA and MI consoles have a microphone on a flexible headband 'goose neck'.

Selected technical data

Number of function buttons	5 + 10…150
Microphone	+
Data and audio transmision format	RS485
Power	20..60 V DC
Optional equipment	KR- extension keyboard PP- connection box
