

Invisible Loudspeaker

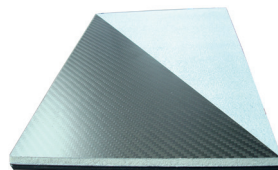

OVERVIEW

You enter a room and beautiful music envelopes you – you’re surrounded by sound that touches your senses, yet you see no loudspeaker hardware. Is this a dream?

You’re experiencing a special room acoustic system, which turns the walls and ceilings themselves into sound sources without visible loudspeakers or cable tangle.

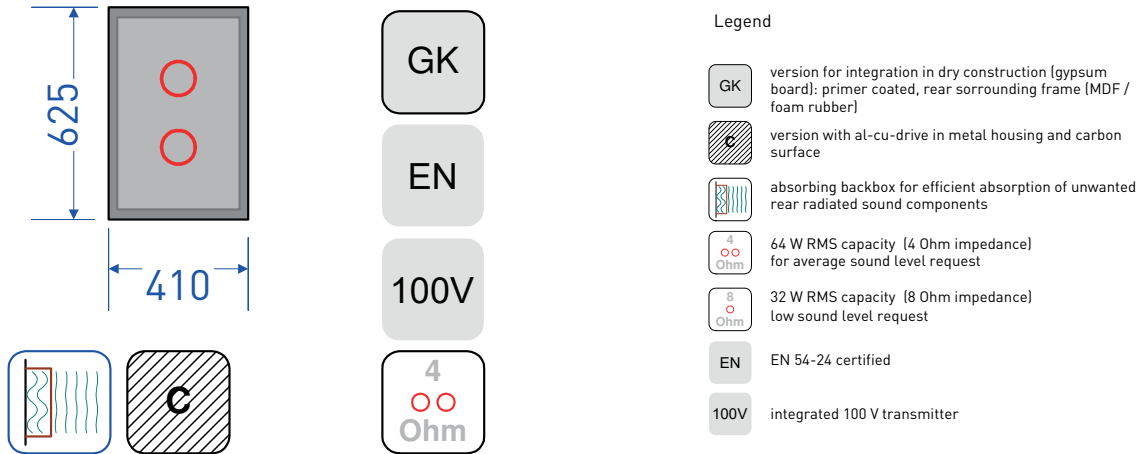

Intara panels integrate completely, and produce perfect sound from walls or ceilings covered with wallpaper, plaster, paint, or other material. Listeners enjoy high performance audio. Owners and Designers enjoy unaltered interior surfaces. This speaker means complete acoustical integration even in the most demanding spaces. These panels are suitable for damp locations too, which means perfect invisible sound even in bath, sauna or wellness area.

In commercial locations the speaker offers a rich variety of uses and advantages. Because of its minimized acoustic feedback characteristic, this speaker is ideally suited to conference and meeting rooms. In hotels and restaurants, it sets new standards for invisible integration. The invisible speaker simply frees designers and consultants from the headache of integrating fine audio and fine interior environments. From press center to interactive showroom, from wellness spa to conference center, from restaurant to entertainment venue it’s defined only by its unlimited applications.

INVLS-60W-R

Invisible Loudspeaker

Technical Data	INVLS-60W-R
Type	Wall or ceiling integration
Mounting depth	70 mm recommended, 52 mm min
Sensitivity 1W, 1m	92 dB*
Capacity	64 W RMS
max. SPL	110 dB*
Frequency range	90 Hz - 20 kHz*
Dispersion	180°
Overload protection	PTC protection circuit
Dimensions (H x B x T)	625 x 410 x 52 mm

* (typical, depending on installation conditions)

Important Note: to guarantee optimal performance and reliability of the systems and thus warranty claim, the use of a specific controller or controller amp is obligatory.
